

# Webinar 2.6 Test Questions

## Questions

1. What does "Outbound SKU Charge" do and when should it be used?
2. If a client is charged \$0.40 per carton picked, should this be handled through Adhoc Charges?
3. Assuming you have two products on one location which total 10 cartons, and you typically charge \$0.40 per carton unless the whole pallet can be picked because you're taking everything from that one pallet (in which case you would charge a \$2.50 pallet pick charge), how would you automate this?
4. Assuming you charge picking fees for an order of \$0.40 per carton, and then wish to charge a fork-load fee for lifting the pallet into a pickup vehicle (assuming the client is picking up from the warehouse), how would you automate this?
5. Would you use a cumulative or non-cumulative sliding scale to charge picking rates whereby 10 cartons or less are charged at \$0.40 per carton, and if there are 11 or more cartons all cartons are charged at \$0.35?
6. Assuming a product has 6 units per carton, and you often pick in cartons but always want to charge for the units picked, how would this be configured?

### Invoicing

7. If an invoice is deleted, what happens to all the jobs (Sale Orders, Purchase Orders, Consignments etc) that were on the Invoice?
8. If your CartonCloud account contains a bunch of test jobs, how do you prevent them from being invoiced?
9. What are leeching invoices?
10. If a job is being manually charged, what other step is required to ensure it doesn't create a Charge Error?

### Adhoc Charges

11. Assume you've created an Adhoc Charge called "Pallet Rework", which is a charge for restacking pallets on putaway, but want to vary the price of this across a handful of customers, how could this be achieved so it is automated going forward?

### Storage

12. Assuming a warehouse has two types of locations, "Inside" and "Outside", whereby both are ambient, and ambient stock can be stored in either but the Inside locations are charged at \$3.50/week whereas the Outside locations are charged at \$2.00/week, how could this be configured to be automated?
13. What does "Double Charge Storage" do?
14. What does "Max Number of New Charges Per Location" do?
